NM THYROID I-131 UPTAKE AND SCAN

Collected on April 6, 2018 8:37 AM

Novant Health

Yousuf Khan, MD 04/6/2018, 11:09 AM

Hi Jennifer, Nuclear Medicine thyroid uptake and scan results are consistent with Graves disease. Please complete the lab work. We will consider treatment with methimazole based on the lab results. Please contact us for any questions. Thanks..

Results

Impression

IMPRESSION:

1. Graves' disease.

Narrative

Radiopharmaceuticals: 6 uCi of I-131 sodium iodide by mouth and 10.4 mCi of Tc 99m Pertechnetate intravenously.

Radioiodine uptake: The 24-hour uptake is calculated at 65% (normal 10 to 30%).

Thyroid imaging: The thyroid gland is mildly enlarged. There is homogeneous hyperactivity in both lobes, left slightly greater than right, with no dominant hot or cold nodules.
