## HEMOGLOBIN A1C

Collected on February 14, 2018 4:55 PM

Novant Health

Gina LiCause 02/18/2018, 8:42 PM

Labs suggest mild Hashimoto's but no treatment or intervention needed. Repeat TSH and free T4 every 6 months. Hope you are doing well and please let us know if you have any questions. Take care, Dr. LiCause

Gina LiCause 02/20/2018, 8:01 AM

Hello! Please forgive me, I did not give you as much information in my note to you as I should have. I should have said that I suspect you have subclinical hyperthyroidism (early Hashimoto's is only 1 way this can happen). Subclinical hyperthyroidism can sometimes lead to Graves disease (a cause for the eyes to sometimes become more prominent). I do want you to proceed with the MRI ordered of the orbits and would like you to come in for one other thyroid blood test. If the MRI confirms Graves, then I would want you to see an endocrinologist (Dr Talip) to review how to proceed from there. If the MRI does not confirm Grave's disease, then you should get TSH and free T4 every 3 months for the next year.

## Results

Performed at: 01 - LabCorp Burlington  
1447 York Court, Burlington, NC 272153361  
Lab Director: William F Hancock MD, Phone: 8007624344

**Hemoglobin A1c**

Normal range: 4.8 - 5.6 %

Pre-diabetes: 5.7 - 6.4

Diabetes: &gt;6.4

Glycemic control for adults with diabetes: &lt;7.0

Authorizing provider: Gina LiCause

Collection date: February 14, 2018 4:55 PM

Specimens: Blood

Result date: February 15, 2018 12:37 PM

Result status: Final
