Novant Health

Yousuf Khan, MD 04/11/2018, 5:01 PM

Hi Jennifer, thyroid antibody levels are high. These results are consistent with Graves disease. However, your thyroid hormone levels have returned to the normal range. This suggest, your Graves disease is undergoing remission. This is a good news. No thyroid medication is indicated at this point. Repeat thyroid labs in 2 months. Contact us for any questions. Thanks.
