Hepatitis C Virus (HCV) Antibody With Confirmation

Collected on June 15, 2023 3:27 PM

William Baker, MD 06/22/2023, 3:06 PM

Ms. Cartrette,

I just wanted to reach out regarding your lab testing.

Overall, I think your lab testing is quite reassuring. Cell counts, electrolytes, kidney function, and liver function was entirely normal.

You had a very minimal, nonspecific elevation of your sedimentation rate (a marker of inflammation) while your C-reactive protein (another marker of inflammation) was normal. This is of unclear clinical significance currently.

Additional screening for underlying infections was entirely negative.

Updated x-ray testing has been ordered of the hands/wrists in addition to the SI joints and lumbar spine. We can complete these at your convenience. I look forward to discussing this in greater detail with you at our follow-up appointment

Results

This test is an immunoassay performed on the Architect platform (Abbott Diagnostics).

Hepatitis C Virus Antibody

Normal value: Non-Reactive

Value

Non-Reactive

Ordering provider: William Baker, MD
Collection date: June 15, 2023 3:27 PM
Specimens: Blood (Venous)
Result date: June 16, 2023 1:00 AM
Result status: Final
Resulting lab:
